USB I/O

# Pricelist

USB I/O makes it possible to control and measure external units in your environment, connect it to your computers USB port. This product can do everything from collecting data from a simple temperature sensor to more advanced tasks as steering motors.

USB I/O exists in many different shapes, functions and appearances. If you have special wishes it is possible to make a tailor made solution.

Remove your cable, attach BlueUSB and you will get a wireless connection for your USB I/O. The range is 100 meters with the Bluetooth class 1 and the solution consists of one module attached to your USB I/O and the other one to your computers USB port.
